

- **RAG Document Question Answering System**

A Python RAG system for answering questions from PDF document collections

[Github](#)

- Built a Python/Streamlit RAG application for grounded question answering across local PDF collections through LangChain.
- Chunked PDFs into 1,000-character windows with 200-character overlap and indexed Google embeddings in FAISS locally.
- Grounded Groq-hosted Llama 3 responses in FAISS-retrieved document context through a retrieval chain for factual answers.
- Cached document embeddings in Streamlit session state to accelerate repeated queries and inspect in-app response latency.
