

Smart Email Assistant

Repository

Role fit: Backend, Full Stack, Java, AI Engineering

Skills: Java 17, Spring Boot 3, WebFlux, Gemini API, React, Chrome Extension

AI-assisted email reply system with a Spring Boot API, React client, and Gmail extension.

- Built a Java 17 and Spring Boot 3 REST service that converts email context and a requested tone into AI-generated replies through the Gemini API.
- Implemented a WebClient-based provider integration with prompt construction and JSON response parsing behind the `POST /api/email/generate` endpoint.
- Developed a Manifest V3 Chrome extension that detects Gmail compose windows, injects an AI Reply control, calls the backend, and inserts generated text into the editor.
- Created a React and Material UI client for email input, professional/casual/friendly tone selection, generated-reply display, and clipboard copy.
