

- **gogent**

A Go framework for LLM agents with built-in OpenTelemetry observability

Github

- Built a Go agent framework with ReAct and plan-and-execute loops, typed tools, graph routing, checkpoints, guardrails, and evaluations.
- Integrated Anthropic, OpenAI, Google, Bedrock, MCP, and A2A behind provider-independent interfaces.
- Added OpenTelemetry tracing, a SQLite span store, an SSE dashboard, and CLI run replay.
- Benchmarked 240 ns node transitions with zero happy-path allocations and 8.7 microseconds of tracing overhead per provider call.
