

EXPERIENCE

- Software Engineering Consultant

Assured Health Technologies

– Created 17 data migration scripts in Python that ran across the database to update various fields.

– Used AWS for deployment and automated production operations using CloudFormation, decreasing deployment time by 67%.

– Optimized Django API to reduce time from 35.7s to 3.7s using indexes and removing extra mutational queries on prefetching.

– Utilized Bun runtime to reduce compile and run time by 53%.
- Software Engineering Intern under LitmusChaos

Cloud Native Computing Foundation Intern

– Developed an upgrade agent streamlining version transitions for Litmus, leading to a 30% reduction in manual intervention time during upgrades and enhancing overall user experience across the platform.

– Engineered sequential upgrade pipeline reducing version migration time for control plane and database updates.

– Automated the process of upgrading the MongoDB schema with every new version of Litmus via manifests.

– Optimized the login API of the Auth server by 98.84% by bringing down the latency from 1.73s to 15.87ms.
- Code For GovTech Dedicated Mentoring Program under Dhiway

Software Engineering Intern

– Designed Go SDK for CORD blockchain, enabling integration of blockchain features with 95% test coverage.

– Wrote unit and fuzz tests to enhance test coverage of the new multi-modular Go SDK.

– Introduced DevOps practices, leading to better testing and faster delivery of Go SDK updates.

– Followed principles of Software Development Life Cycle, resulting in a 30% decrease in code review time.
- Google Summer Of Code (Intern at Organic Maps)

Software Developer Intern

– Built high-performance proxy using TypeScript and NodeJS, serving 50K+ requests/day with 99.9% uptime on Cloudflare Workers.

– Architected proxy to convert Google Maps URIs to custom formats, reducing load time by 60%.

– Integrated the newly prepared proxy seamlessly into both iOS and Android applications, enabling a streamlined API interaction that improved data fetching speed by 30% across mobile platforms.

PERSONAL PROJECTS

- Go-microservice

A simple HTTP API server with rate throttling over gRPC

– Developed a web server with Redis-based IP address caching, reducing average response times by 15%.

– Enhanced gRPC server performance by implementing rate-limiting, resulting in a 20% decrease in request latency.

– Improved server performance by 25% through efficient Redis-based user request caching.

– Incorporated system observability and maintainability through Prometheus and Grafana metrics exposure.

TECHNICAL SKILLS AND INTERESTS

Languages: JavaScript, TypeScript, Go, Python, Rust, C++, PHP, SQL
Frameworks: ExpressJS, ReactJS, Socket.io, Web3JS, jQuery
Cloud/Databases: AWS, Ansible, Docker, Prometheus, Apache Kafka, Thanos, OpenTelemetry, Kubernetes, MongoDB, MySQL
Coursework: Udemy certifications of Web Development and Kubernetes, completed Google Cloud Engineer track for Google Cloud event, GDSC IIT Patna, MA101 and MA102 (Linear algebra and real analysis)

POSITIONS OF RESPONSIBILITY

- Dev Team Coordinator of Tech Fest, IIT PatnaCelesta, IIT Patna

December 2022 - February 2023
- WebNApp Team Coordinator of Sports Fest, IIT PatnaInfinito, IIT Patna

December 2022 - January 2023
- MemberGDSC, IIT Patna

May 2022 - November 2022

EDUCATION

- Indian Institute of Technology Patna

Bachelor of Technology

2025

ACHIEVEMENTS

- Secured 6th rank in Inter IIT Tech Meet 12.0
- Solved 200 DSA problems on LeetCode and Codeforces
- Top 1 percentile of almost 1 million applicants for IIT
