

- **RAG Document Question Answering System**

A Python RAG system for answering questions from PDF document collections

[Github](#)

- Built a Python Streamlit RAG application for question answering over local PDF collections.
- Chunked PDFs at 1,000 characters with 200-character overlap, embedded with Google, and indexed in FAISS via LangChain.
- Grounded Groq-hosted Llama 3 answers in FAISS-retrieved context through a document chain.
- Cached embeddings in Streamlit session state for repeated queries and response-time inspection.
